PROTECTION

### COOL FINDS

Trips away present an opportunity to test new gadgets and gear. Here are some of the items we looked at.

### Vital Protection

Vital Protection is a product developed in the UK and now manufactured in South Africa for the African market. After thorough testing locally, the product was pronounced highly effective for use throughout the African continent. Applying this product is another part of the very important prevention regime every camper should practise. You simply spray Vital Protection on clothes, bedding and even tents to repel mosquitoes, and the product will retain its effect even after 30 washes or three months! **For more information visit [www.vitalprotection.co.za](http://www.vitalprotection.co.za) or contact 011 811 7610.**
