About Vital Protection

Vital Protection is a highly effective, market leading anti-insect protection technology that can safeguard the user and fabric from biting insects like mosquitoes, midges, sand flies, fleas and bed bugs. It can be applied to polyester, nylon, cotton, wool and aramids to provide a highly effective barrier against many insects. Vital Protection will also inhibit odours and fabric degradation - 3 enviable, much sought after benefits in one vital product!

Vital Protection is suitable for most articles including outdoor textiles, home textiles, clothing, shoes, floor coverings, wall coverings, foam items and various plastic end uses. It is perfect for application on active, outdoor and sportswear and outdoor equipment (e.g. tents and sleeping bags) that will be used on adventure travels. In countries where mosquitoes and biting insects are prevalent, there is no limit for scope.

About Us

Celebrating over 20 years of textile know-how, HHL is a company dedicated to offering bespoke textile solutions across performance & specialty apparel fabrics, active wear, uniform fabrics, and technical fabrics. HHL Group has operations in Europe, Africa, South America, and China. HHL's fabric applications have addressed the needs of an ever growing and demanding market and are embraced by some of the world's most recognised brand names in the active wear, outdoor clothing, outdoor equipment, home, and commercial textile markets.

Whether you want your textiles protected from odour-causing bacteria, mould, fungi, a torrential rainstorm or biting insects, HHL has the products you need to achieve added value and performance.

All our products use the most advanced technology available. They have been independently tested and are safe to both the environment and the user.

If you manufacture or buy a garment or piece of equipment with an HHL Technology logo, you can be sure that it will be fresher, healthier and more hygienic.
